

**Why should
sustainable wildlife
management
protect animal
welfare too?**

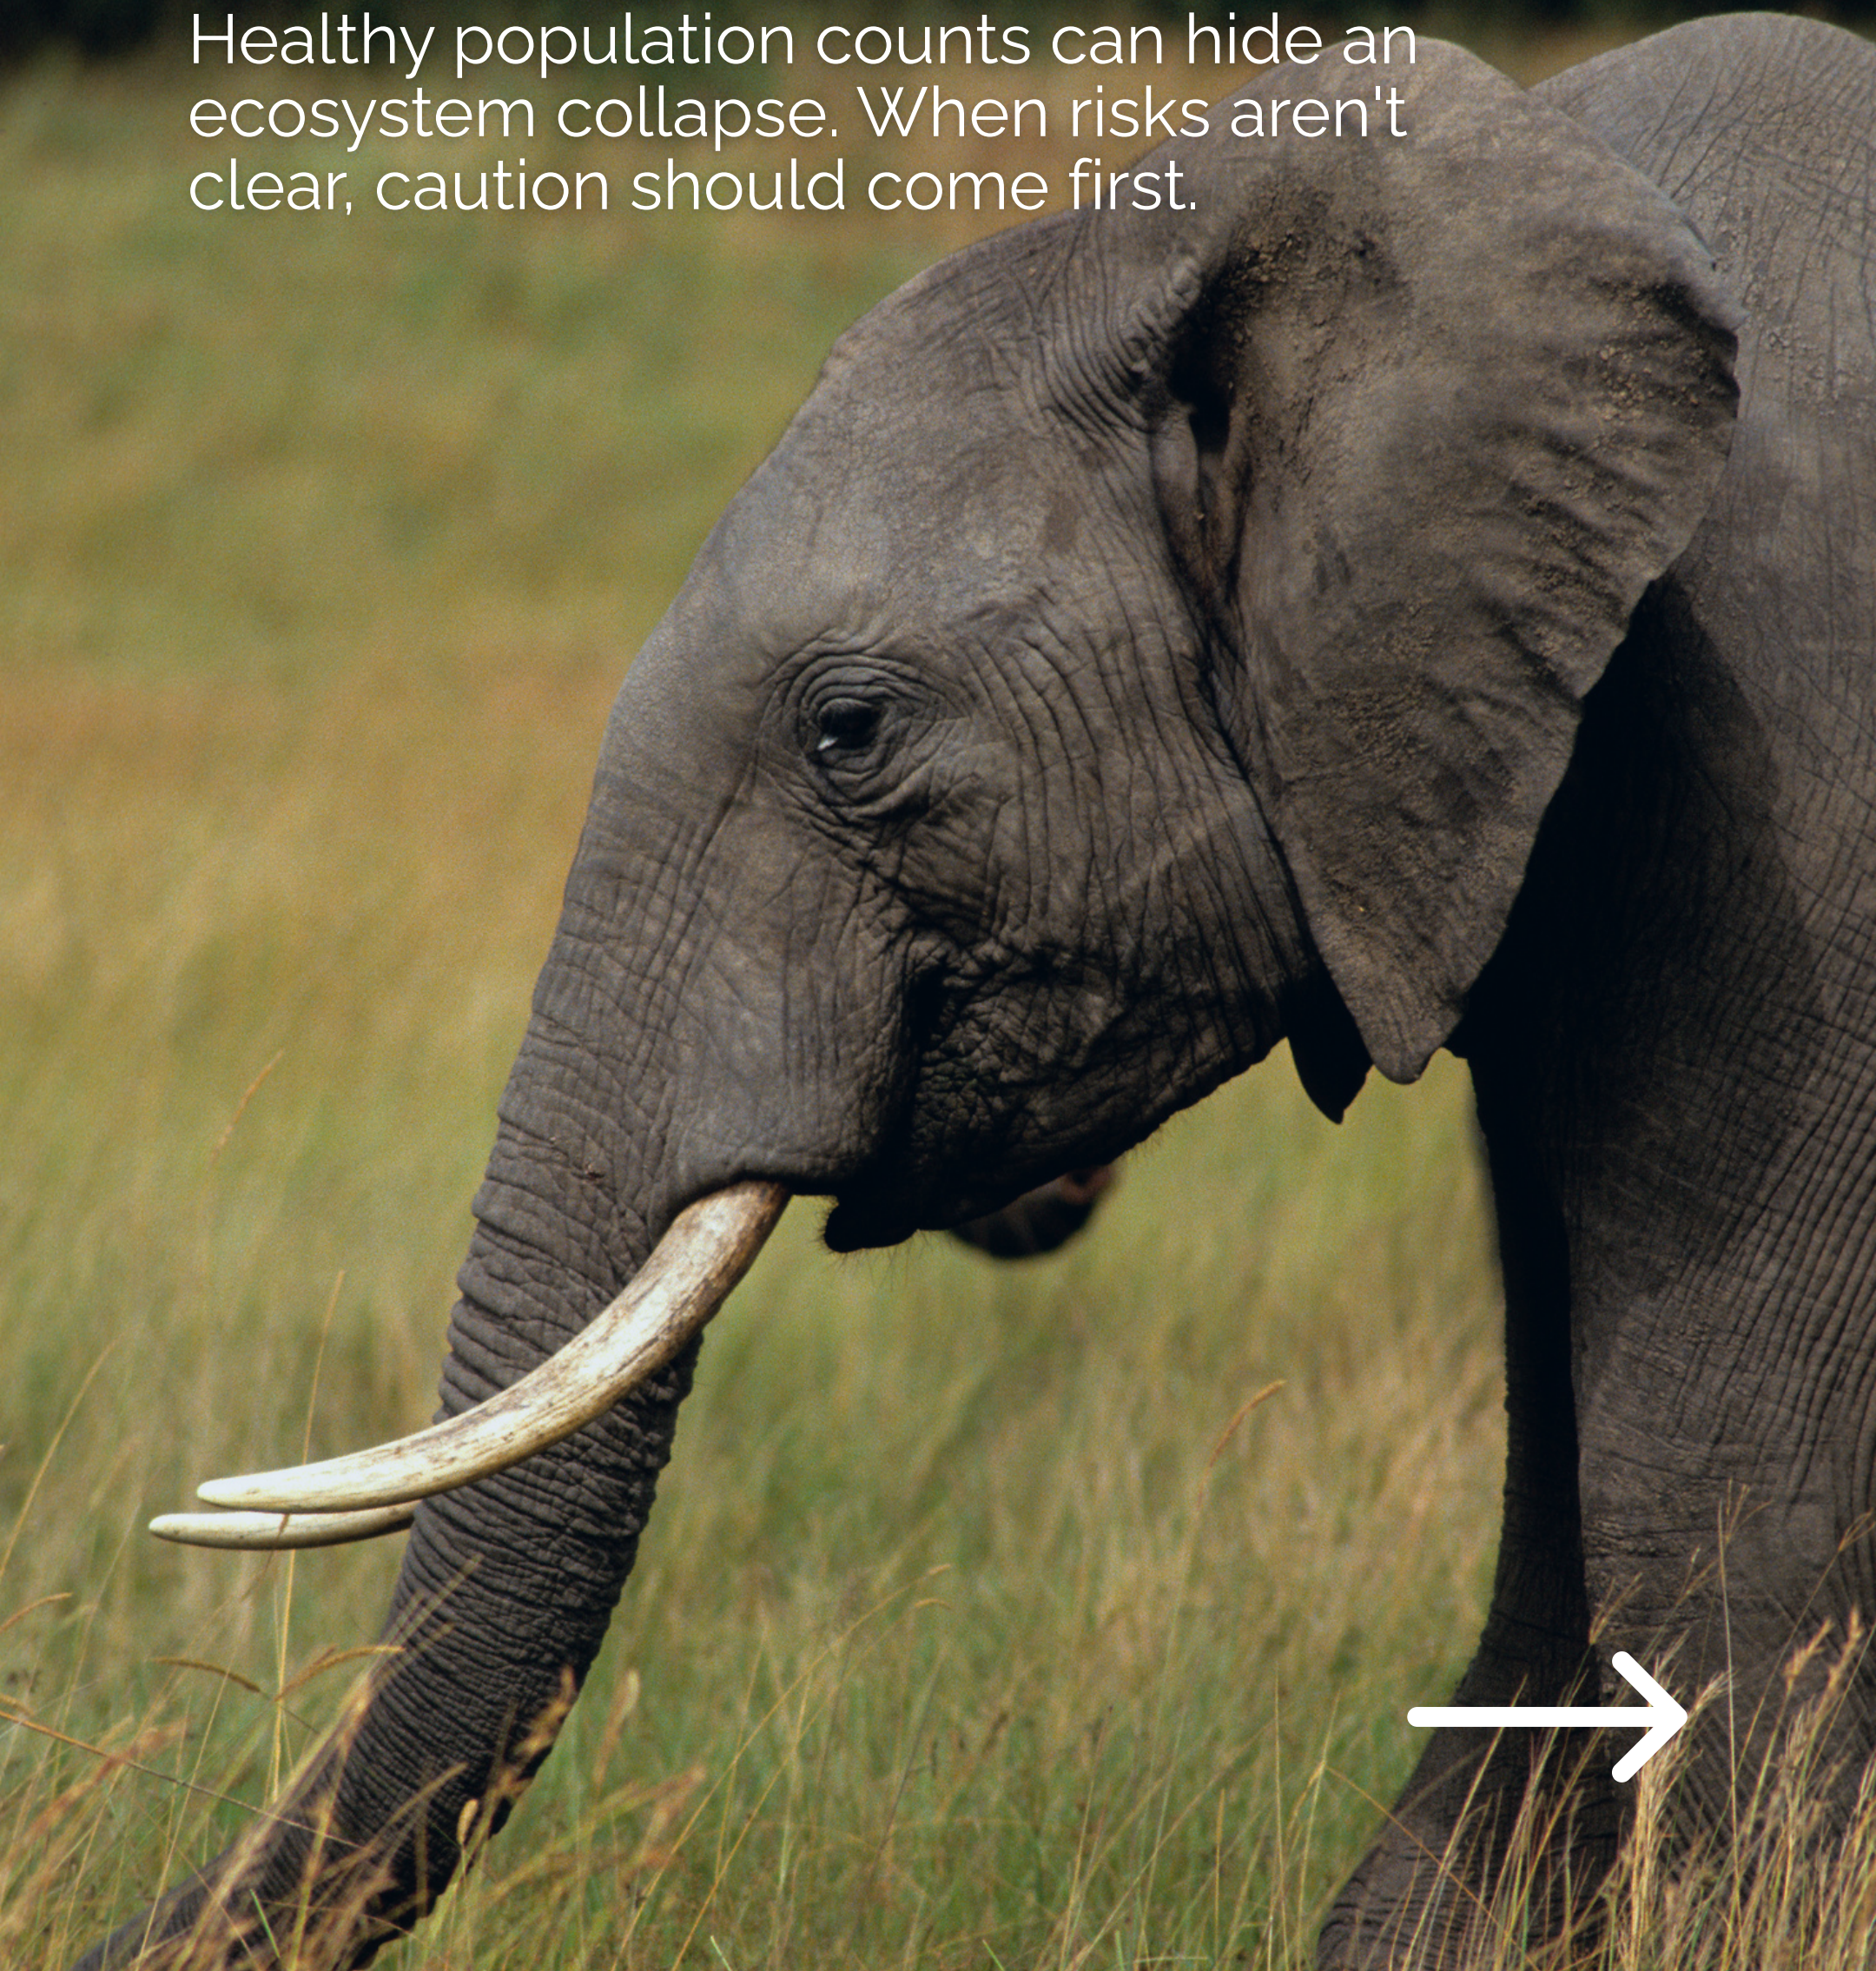

Safe for animals.

Being legal doesn't mean being humane.
Wild animals need real protection at every
stage, from capture to trade.

Safe for ecosystems.

Healthy population counts can hide an ecosystem collapse. When risks aren't clear, caution should come first.

Safe for people.

Stressed, poorly handled animals are more likely to spread disease. Welfare safeguards are a public health measure.
